2. LIMITATIONS

No change in the basic Flight Manual data.

3. EMERGENCY AND MALFUNCTION PROCEDURES

3.1 WARNING LIGHT INDICATIONS

WARNING LIGHT INDICATIONS

GEN 1 or **GEN 2**

Conditions/Indications

Generator failure

– Voltmeter indication normal (27 - 29 V)
– **GEN** warning light (affected generator) on

Generator overvoltage

– Voltmeter indication above normal (30 V or more)
– **GEN** warning light (normal generator) on

NOTE Normal generator is disconnected by reverse current of affected generator.

Procedure

NOTE One generator alone will provide sufficient power for normal services. Non-essential Auxiliary Bus loads are shed automatically.

● **GENERATOR FAILURE**

1. Generator field sw (affected generator) – GEN TRIP, then hold in GEN RES for approx 2 sec and release

If **GEN** warning light remains on:

2. Generator field sw (affected generator) – GEN TRIP
3. STARTER/GENERATOR sw (affected generator) – Off
4. CURRENT IND sw – Select normal generator
5. Ammeter and voltmeter – Monitor

● **GENERATOR OVERVOLTAGE**

1. Generator field sw (affected generator) – GEN TRIP
2. STARTER/GENERATOR sw (affected generator) – Off

3. **GEN** warning light (affected generator) – Check on
4. **GEN** warning light (normal generator) – Check off
5. CURRENT IND sw – Select normal generator
6. Ammeter and voltmeter – Monitor

WARNING LIGHT INDICATIONS

GEN 1 and **GEN 2**

Conditions/Indications

Both generators have failed or are disconnected from the power distribution circuit.

Procedure

1. Each generator field sw in turn – GEN TRIP, then hold in GEN RES for approx 2 sec and release

If both **GEN** warning lights remain on:

2. Both generator field sw – GEN TRIP
3. Both STARTER/GENERATOR sw – Off
4. CURRENT IND sw – BUS BAR (BATT)
5. Electrical consumption – Reduce
6. Ammeter and voltmeter – Monitor
7. LAND AS SOON AS PRACTICABLE

Residual Battery Endurance					
Continuous load [A]	15	20	25	30	40
Time [min]	60	45	35	30	22
NOTE Calculations are based on an assumed minimum battery capacity of 15 Ah. Times include 10-min landing light operation and 10-min radio transmitting.					

3.2 FIRE EMERGENCY CONDITIONS

3.2.1 Electrical Fire

Conditions/Indications

– Odor of burning insulation and/or acrid smoke

Procedure

● **O N G R O U N D**

1. Passengers	**–**	**Alert/Evacuate**
2. Double engine emergency shut-down	**–**	**Perform**
3. EPU, if connected	**–**	**Disconnect**
4. Fire	**–**	**Extinguish if possible**

● **I N F L I G H T**

1. Passengers	**–**	**Alert**
2. Both generator field sw	**–**	**GEN TRIP**
3. Both STARTER/GENERATOR sw	**–**	**Off**
4. Battery sw	**–**	**Off**
5. Fire	**–**	**Extinguish if possible**
6. Electrical consumption	–	Reduce
7. Battery sw	–	On
8. CURRENT IND sw	–	BUS BAR (BATT)
9. Ammeter and voltmeter	–	Monitor
10. LAND AS SOON AS PRACTICABLE		

Residual Battery Endurance					
Continuous load [A]	15	20	25	30	40
Time [min]	60	45	35	30	22

NOTE Calculations are based on an assumed minimum battery capacity of 15 Ah. Times include 10-min landing light operation and 10-min radio transmitting.

If indications of electrical fire continue:

11. Battery sw	**–**	**Off if flight conditions permit**
12. LAND AS SOON AS POSSIBLE
