NOTE Above values in parentheses apply to Model S Variants.				

7. SYSTEM DESCRIPTION

A hand lamp, centrally located in the cabin roof, is used as an emergency light for instrument or switch panel illumination or for map reading. The lamp is powered via a circuit breaker on the switch panel and operated by a switch and a rheostat on the lamp housing.

The instruments are illuminated by eyebrow and post lights powered via a circuit breaker on the switch panel. These lights are controlled by a rheostat on the instrument panel.
