

## 6. MASS AND BALANCE

### 6.1 EQUIPMENT LIST ENTRIES

| System/Equipment Designation | Part No. | Mass (kg) | Arm (mm) | Massmoment (kgmm) |
|------------------------------|----------|-----------|----------|-------------------|
| 450W Xenon Searchlight       | D136-17  | 10.1      | 200      | 2020              |

## 7. SYSTEM DESCRIPTION

The 450W searchlight is installed on the LH fuselage at the jack fitting aft of the forward cross tube.

The searchlight may be controlled from any location within the cabin by means of a remote control handle having a power (on-off) pushbutton and a four-way directional control switch.

The directional control switch functions are:

| SWITCH POSITION | LIGHT BEAM DIRECTION |
|-----------------|----------------------|
| Fwd             | Up                   |
| Aft             | Down                 |
| Left            | Left                 |
| Right           | Right                |

The remote control handle is stowed in a retaining clip fitted on the cabin floor adjacent to the RH collective lever.

A SEARCHLIGHT circuit breaker on the center console switch panel protects the searchlight electrical circuit.
