

## 6. MASS AND BALANCE

### 6.1 EQUIPMENT LIST ENTRIES

| System/Equipment Designation | Part No.  | Mass (kg) | Arm (mm) | Massmoment (kgmm) |
|------------------------------|-----------|-----------|----------|-------------------|
| Scavenge Oil Filters         | 105-80117 | 3.4       | 3200     | 10880             |
| Scavenge Oil Filters         | 105-80125 | 3.8       | 3200     | 12160             |

## 7. SYSTEM DESCRIPTION

Filter assemblies are fitted to each engine's scavenge oil return line upstream of the oil cooler to trap minute carbon and non-magnetic particles. Both filters are mounted one above the other on the aft face of the engine oil tank/cooler assembly; the upper filter for the RH engine oil system, the lower filter for the LH engine oil system.

A red-colored, pin-type bypass indicator on each filter will pop out to indicate impending filter element blockage. Should the filter element become blocked, a bypass valve will open providing continuous oil flow.
